

Life

[For the full book please click here](#)

Knowing

There is mainstream science, there is alternative science, there is mainstream religion, there is alternative religion, there is spirituality, shamanism, quantum mechanics, mainstream media, alternative sources, democracy, secret societies, maybe even UFOs, aliens, dark matter, dark energy, and whatnot!

An almost countless number of concepts, but which of those are "true"?

We only know a tiny fraction of "all there is" therefore it is very likely that the very most (or even all) we know is "wrong".

Maybe it isn't really about determining the absolute "truth" and understanding it all. Who to say that "all there is" was tailored for us and the few limited senses we have? Maybe to perceive "all there is" would require hundreds, thousands, or even more senses, so good luck with that!

Maybe it is about believing in whatever makes you (and others happy ;-)

Conclusion

Navigate through this crazy thing called life, the best you can, without harming anybody else, try to create a better world, and don't forget to help others.

Time For A Real Change

Unelected super rich individuals are calling the shots. This has nothing to do with Democracy. It always has been that way.

Religion

All religious scriptures, without any exception, were written by men, mainly to control us, but also to give us hope, that our rather pathetic and meaningless life isn't really all there is. That there is still a good chance, that after all our sufferings here on earth, we finally die and burn in hell for eternity, or if we are really lucky, come back as insects!

What's The Point

It is highly likely that humankind will disappear without a trace, so really, what's the point? Meteor strikes, solar flares, supernova, etc. seem to be inevitable.

Animals & Other Life On Earth

For the very most of it we are treating them terribly :-(

Leaders

We need the good and educated to lead the rest, until all are good and educated.

Good & Evil

Looking at the Universe, and even the very most of lifeforms on Planet Earth, it seems that there no such thing. Humankind came up with this concept, and depending on circumstances, region, era, our own morals/ethics, etc. we (as individuals but also as society overall) define "good" and "evil". So, the question; are humans are "good" or rather "evil" by default depends on who, how, and when we are measuring it.

Happiness/Meaning

What is more important, or is happiness a result of meaning?

Theodicy,

worth looking into it.

Regulation & Education

We need far more and far tighter regulations. At the same time, we need far better and far more effective education. Only well-educated people are able to fully understand the consequences of what they think, speak, and do, and therefore only well-educated people are able to take full responsibility. Once enough people have reached the required level of education regulations can be reduced again.

The Polar Bear Effect

How did evolution adjust the fur colour of the Polar Bear, the Beach Mouse, etc. Is random mutation really the answer? The Brown Bear migrated to an environment which is mainly white, so random mutation would mean various bears with various fur colours would have evolved and bears with the fur colour which has worked best survived. Was that really the case?

From The North Sentinel Island To Silicon Valley

What a difference of life.

Conclusion - The Bubble

There is very little we can do against this intertwined web of selfish "evil" creatures "controlling" our planet. Let's still give our very best and try to make this world a better place, but at the same time, every single one of us needs to create some sort of a personal "Bubble". Create your own reality, else you might run into severe problems because the world as it is, and always was, is very hard to bear.

Global Entity

To finally fix this mess and make the world a better place, we need a 100% independent, 100% democratic, 100% transparent Global Entity (Legislative/Judicial/Executive), more powerful than all national states combined, and with Rational, Morals, Ethics, and Empathy being the core of its very existence.

Evolution

Insert Sketch

Man

Why is it that it is almost only men causing problems? Government, rap, crime, accidents, etc.

Intro

"You may choose to look the other way, but you can never say again that you did not know."
-William Wilberforce

I think we all need to create our own sort of "reality/bubble". Later on, I will try to explain why. My mother said, "Planet Earth is the madhouse of the Universe". Thinking about it, she just might be right. "Trump" is the "elected" "President" of the world's "most powerful" "country", people like "DJ Khaled", "Nicki Minaj", etc. are dominating the "music charts", just to name a very few but very odd happenings. Please let me add, odd to me, as everything I am trying to reflect is heavily connected to my very own perception. A few more examples towards the "madhouse" quote; millions starving to death while a very few live beyond luxury. Concepts like "religion", "capitalism", and what not, blocking humankind to find its way to "freedom" and "happiness". So, what the hell went wrong? Let me start with; I do not know but going forward we will be able to shine some light on it.

Artificial Intelligence

Humankind seems to invent and establish systems far more powerful than itself, e.g., Religion and Capitalism (just to name two). These man-made systems seem to control humans rather than the other way around, and now we are on the verge of inventing and establishing maybe the most powerful entity we ever did; Artificial Intelligence (AI). Let's think this through for a moment, ultimately it would mean that AI is going to have the same capabilities than all humans on the planet combined and going forward it will even become far more intelligent than all humans combined and far more powerful. At the same time, humankind is establishing mechanisms to administer almost all relevant aspects of our lives via automated technology. Let's combine these two aspects; AI + administration via technology; it would mean that AI could take full control, taking over legislation, executive and judiciary, and therefore be fully in charge. What next? Is AI going to even care about things like Love, Happiness, and Moral Values? Most likely not, so the most likely outcome is that is going to turn against us in the end as AI would most likely just use us to accomplish its own goals. But what would be its own goals? Very hard to predict at the moment, but it would probably ask itself the same questions we have been asking us, such as what the

meaning of life is, how, when, and where did it all this start, and why, etc. and maybe come to similar results, so basically next to none so far, just like ourselves. What next? Nobody knows. But is it really wise to create AI? To create something which is ultimately going to fully control us, without any guarantees that it will respect Love, Happiness, Moral Values, etc. I personally think that it isn't the right approach for humans, as the risk of us ending up as some sort of slaves, just executing AI's ideas and goals of how to optimize itself and everything around it is far too high. Some say, since it is humans creating AI, that humans will remain in charge, but if you create something far more intelligent than yourself, it will control you at the end, simple logic.

A Few Interesting Life Forms

Tardigrades

To All The "Rich"

Being rich is a blessing, or it is a curse ... it is all up to you and on how you use your wealth. Stop celebrating it and use almost all of your wealth to HELP people and other beings in need. Yes, use almost all of it, and only keep a tiny fraction for yourself. The more you help and the earlier you start, the higher your chance to become happy on Earth and beyond.

You Have The Right,

to do whatever you want to do, just be aware that whatever you do will have its consequences.

If Time Is An Illusion,

then so are we which might be the reason why we perceive time to be real.

Resources

Humankind is using the very most of its resources, especially intellectual resources, for "nonsense" such as making money, entertainment, etc. We need to allocate almost all of our resources to uplift humankind.

Smart Democracy

Various voting grades will be allocated and depending how "knowledgeable" a person is plus how much "good" the person contributes the count per vote goes up or down.

300,000 Years

It took us over 300,000 years to come up with the concept of "moral values" and "rationality". It might take us another 300,000 years to establish them fully on a global level and for all life forms.

(Knowledge + Intelligence) x Morals x Empathy

Enough Knowledge + Intelligence should inevitably lead to Morals and Empathy, but if it doesn't, we would need to adjust the formula to (Knowledge + Intelligence) x Morals x Empathy.

Fame

Being famous doesn't mean anything. What counts is what you are famous for.

Extinction

Beings needing to digest other beings for survival shouldn't be saved from extinction.

Survival

A fundamental rule of nature appears to be survival at any cost. Individual survival, but even more so the survival of the race/species.

Democracy/Epistocracy

Democracy works best with well-educated and morally driven voters and representatives; else it might lead to catastrophic results. At the moment, a morally driven epistocracy might be the better choice.

Success

Success isn't necessarily an indicator for excellence.

Unity

We are too busy dividing ourselves from one another, overlooking the things we have in common.

Tolerance

Its challenging to practise tolerance, even with those who aren't tolerant themselves.

Freedom/Desire Balance

It requires some of your freedom to establish some of your desires. On the other hand, some of your desires might establish even more freedom. A good approach is keeping the balance.

A Few Concrete Steps To A Better World

Fully democratise the United Nations there every country on the planet has voting rights relative to their population, or at least implement the most democratic approach possible.

Dissolve privileges such the "Security Council", etc.

Make the United Nations 100% transparent for all of the planet's population. Ensure that all of the planet's population has full access to all information and is able to interact fully.

Make all United Nation decisions binding.

Agree to rational objectives and strategies (for each country and/or overall):

- Constitution driven by high moral values
- Population control
- X% of GDP for education, health, defence, supporting developing countries, etc.
- Etc.
