Conclusion - The Bubble

There is very little we can do against this intertwined web of selfish "evil" creatures "controlling" our planet. Let's still give our very best and try to make this world a better place, but at the same time, every single one of us needs to create some sort of a personal "Bubble". Create your own reality, else you might run into severe problems because the world as it is, and always was, is very hard to bear.

Global Entity

To finally fix this mess and make the world a better place, we need a 100% independent, 100% democratic, 100% transparent Global Entity (Legislative/Judicial/Executive), more powerful than all national states combined, and with Rational, Morals, Ethics, and Empathy being the core of its very existence.

Evolution

Insert Sketch

Man

Why is it that it is almost only men causing problems? Government, rap, crime, accidents, etc.

Intro

"You may choose to look the other way but you can never say again that you did not know."
-William Wilberforce

I think we all need to create our own sort of "reality/bubble". Later on I will try to explain why. My mother said "Planet Earth is the madhouse of the Universe". Thinking about it, she just might be right. "Trump" is the "elected" "President" of the world's "most powerful" "country", people like "DJ Khaled", "Nicki Minaj", etc. are dominating the "music charts", just to name a very few but very odd happenings. Please let me add, odd to me, as everything I am trying to reflect is heavily connected to my very own perception. A few more examples towards the "madhouse" quote; millions starving to death while a very few live beyond luxury. Concepts like "religion", "capitalism", and what not, blocking mankind to find its way to "freedom" and "happiness". So what the hell went wrong? Let me start with; I do not know, but going forward we will be able to shine some light on it.

Artificial Intelligence

Mankind seems to invent and establish systems far more powerful than itself, e.g. Religion and Capitalism (just to name two). These man-made systems seem to control humans rather than the other way around, and now we are on the verge of inventing and establishing maybe the most powerful entity we ever did; Artificial Intelligence (AI). Let's think this through for a moment, ultimately it would mean that AI is going to have the same capabilities than all humans on the planet combined, and going forward it will even become far more intelligent than all humans combined and far more powerful. At the same time, mankind is establishing mechanisms to administer almost all relevant aspects of our lives via automated technology. Let's combine these two aspects; AI + administration via technology; it would mean that AI could take full control, taking over legislation, executive and judiciary, and therefore be fully in charge. What next? Is AI going to even care about things like Love, Happiness, and Moral Values? Most likely not, so the most likely outcome is that it is going to turn against us in the end as AI would most likely just use us to accomplish its own goals. But what would be its own goals? Very hard to predict at the moment, but it would probably ask itself the same questions we have been asking us, such as what is the meaning of life, how, when, and where did it all this start, and why, etc. and maybe come to similar results, so basically next to none so far, just like ourselves. What next? Nobody knows. But is it really wise to create AI? To create something which is ultimately going to fully control us, without any guarantees that it will respect Love, Happiness, Moral Values, etc. I personally think that it isn't the right approach for humans, as the risk of us ending up as some sort of slaves, just executing AI's ideas and goals of how to optimize itself and everything around it is far too high. Some say, since it is humans creating AI, that humans will remain in charge, but if you create something far more intelligent than yourself, it will control you at the end, simple logic.

Interesting Life Forms

To All The Rich

Being rich is a blessing, or it is a curse ... it is all up to you and on how you use your wealth. Stop celebrating it, and use almost all of your wealth to HELP people and other beings in need. Yes, use almost all of it, and only keep a tiny fraction for yourself. The more you help and the earlier you start, the higher your chance to become happy on Earth and beyond.

You Have The Right

to do whatever you want to do, just be aware that whatever you do will have its consequences.

If Time Is An Illusion

then so are we which might be the reason why we perceive time to be real.

Resources

Mankind is using the very most of its resources, especially intellectual resources, for "nonsense" such as making money, entertainment, etc. We need to allocate almost all of our resources to uplift mankind.

Smart Democracy

Various voting grades will be allocated, and depending how "knowledgeable" a person is plus how much "good" the person contributes the count per vote goes up or down.

300,000 Years

It took us over 300,000 years to come up with the concept of "moral values" and "rationality". It might take us another 300,000 years to establish them fully on a global level and for all life forms.

(Knowledge + Intelligence) x Morals x Empathy

Enough Knowledge + Intelligence should inevitably lead to Morals and Empathy, but if it doesn't, we would need to adjust the formula to (Knowledge + Intelligence) x Morals x Empathy.

Fame

Being famous doesn't mean anything. What counts is what you are famous for.

Extinction

Beings needing to digest other beings for survival shouldn't be saved from extinction.

Survival

A fundamental rule of nature appears to be survival at any cost. Individual survival, but even more so the survival of the race/species.

Democracy/Epistocracy

Democracy works best with well educated and morally driven voters and representatives, else it might lead to catastrophic results. At the moment, a morally driven epistocracy might be the better choice.

Success

Success isn't necessarily an indicator for excellence.

Unity

We are too busy dividing ourselves from one another, overlooking the things we have in common.

Tolerance

It's challenging to practise tolerance, even with those who aren't tolerant themselves.

Freedom/Desire Balance

It requires some of your freedom to establish some of your desires. On the other hand, some of your desires might establish even more freedom. A good approach is keeping the balance.

A Few Concrete Steps To A Better World

Fully democratise the United Nations so every country on the planet has voting rights relative to their population, or at least implement the most democratic approach possible.

Dissolve privileges such as the "Security Council", etc.

Make the United Nations 100% transparent for all of the planet's population. Ensure that all of the planet's population has full access to all information and is able to interact fully.

Make all United Nations decisions binding.

Agree to rational objectives and strategies (for each country and/or overall):

- Constitution driven by high moral values
- Population control
- X% of GDP for education, health, defense, supporting developing countries, etc.
- Etc.
